

Sample ICC Profiles

Part of our [Basic Calibration](#) service, ICC Profiles are used to apply calibration data at the computer's operating system level, ensuring consistency across all applications.

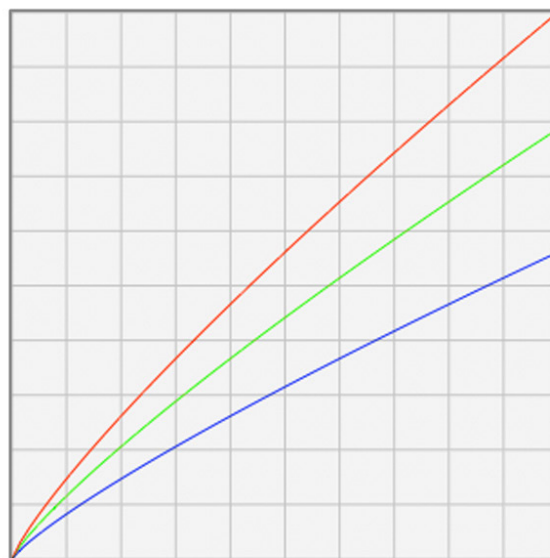

During Windows & Mac calibration, it is important to load a NULL ICC Profile to remove any color adjustments the computer may have added to the display.

We have also included a Sample ICC Profile (using a generic color transform) to visually verify that the ICC Profiles are loading correctly.

Learn how to install ICC Profiles: [Windows](#) | [Mac](#).
